MEALVANA

Endurance.

THE AI-NATIVE NUTRITION PLATFORM FOR
ENDURANCE ATHLETES AND THE COACHES WHO
GUIDE THEM.

FOUNDERS

XUAN HUANG / LEE MARTIN

PARENT

MILKMAN INC.

BASED IN

BIRMINGHAM, ALABAMA

Four gaps no existing tool closes together.

Endurance athletes live at the intersection of training load, fueling science, and coach guidance — and today's tools treat each as a silo.

01 Chronic under-fueling, mistimed calories
Endurance athletes under-eat and mis-time nutrition around workouts, leaving performance and recovery on the table.

02 Static macros, dynamic training
Daily nutrition should periodize with load — but athletes are stuck with flat monthly targets that ignore what the calendar demands.

03 Time-starved, not logging-ready
Athletes need fast, healthy, training-appropriate plans they can act on today — not a 30-minute logging ritual.

04 Nutrition is a coach blind spot
Coaches have no scalable way to prescribe, verify, and adjust athlete nutrition across training blocks.

One platform, built for endurance sport.

Mealvana Endurance pairs proprietary fueling algorithms with a plain-language AI assistant, translating training data into action athletes actually follow.

01

Precise fueling

Algorithms translate training data into macros, hydration, sodium, and pre/during/post-workout nutrition.

02

True periodization

Daily targets adapt to training load and phase — not a static monthly plan.

03

Quick and healthy

Fast meal suggestions and shopping lists that fit a real training schedule.

04

Coach accountability

Verification dashboards and adjustment tools give coaches the visibility they've never had.

MEALBUDDY
AI

A CONVERSATIONAL ASSISTANT THAT TURNS ALL OF THIS INTO PLAIN-LANGUAGE GUIDANCE
ATHLETES ACTUALLY FOLLOW.

AI-native isn't a feature. It's how we run.

Five functions, one operating model. The leverage of a much larger team — and the speed to out-ship competitors retrofitting AI onto spreadsheet-era products.

01

Engineering

AI-assisted development across the full stack.

02

Research & CRM

Structured pipelines turn coach interviews into insights, problem statements, and CRM updates.

03

Content

Podcast, Reels, SEO and AEO production powered by AI workflows.

04

Design & UX

AI-assisted Figma and Claude design iteration, embedded in the build loop.

05

Ops

Notion-based agent workflows orchestrate the business end-to-end.

Nine capabilities, one endurance stack.

From training-load math to race-day execution — the end-to-end fueling system for athletes and the coaches they answer to.

01

Daily macro algorithm

Tuned to training load, not a flat weekly target.

02

Workout fueling engine

Pre-, during-, and post-workout nutrition calculated per session.

03

Hydration & sodium

Research-backed algorithms for fluid and electrolyte targets.

04

Race-day planner

Dialed fueling plans for the events athletes train all year for.

05

MealBuddy AI assistant

Conversational nutrition guidance in plain language.

06

Quick meal plans

Auto-generated shopping lists that match training and schedule.

07

Nutrition transparency

UI surfaces the "why" behind every recommendation.

08

Coach verification

Dashboards to prescribe, monitor, and adjust athletes at scale.

09

Platform integrations

Live with TrainingPeaks and Final Surge — inside existing coach workflows.

Dominate the niche, then cross the chasm.

We are not trying to replace MyFitnessPal on day one. Endurance nutrition is our beachhead — a defensible, underserved niche where we can win decisively, build unmatched expertise, and earn the trust of the most demanding users in health.

From there we expand into adjacent performance categories, and eventually into active health at scale.

01

Win endurance

02

Expand adjacent

03

Cross the chasm

A wide-open lane between mass and niche.

MASS MARKET INCUMBENT

THE OPEN LANE

**Mealvana
Endurance**

AI-Native
Purpose-built for endurance

B2B2C
Built around the coach-athlete
relationship

The first truly AI-native endurance

The incumbents built their architecture before AI. The specialists are too small. The endurance-native, AI-native platform does not yet exist.

CLOSEST SPECIALIST

Monthly age-group athletes

Retrofit
Bolting AI onto legacy product

Endurance-specific, but small and

Four tailwinds converging at the same moment.

The window to define AI-native endurance nutrition is open now — and it won't stay open long.

01

Record participation

Post-pandemic endurance participation at all-time highs across marathons, triathlons, gravel, and ultra.

02

Athletes expect personalization

Every other part of training is already data-driven and adaptive — nutrition is the conspicuous exception.

03

AI maturity

LLMs can finally combine rigorous sports science with natural conversation athletes trust.

04

Coach leverage demand

Coaches are actively seeking scalable ways to serve more athletes without sacrificing quality.

B2B2C through the coach flywheel.

Primary Channel

Coaches license and distribute.

Coaches license Mealvana Endurance and roll it out to the athletes they already serve — creating sticky professional workflows and distribution that compounds with every coach we win.

A primary channel that compounds distribution, complemented by three reinforcing revenue layers.

01 B2C freemium subscriptions

Direct athlete plans with founding-member pricing for early adopters.

02 Brand-funded integrations

Partnerships with endurance nutrition brands embedded directly inside the product.

03 Retail media & grocery

Longer-term monetization via the Milkman retail-media and grocery-partnership platform.

Five channels, one flywheel.

Every channel ultimately serves the same loop: each coach onboards multiple athletes, each athlete deepens the coach's use of the product.

01	Coach engagement	Direct outreach, our Pilot Coach Program, and conference presence — each coach onboards multiple athletes and compounds distribution.
02	Influencer engagement	Endurance athletes and coaches influencers with trusted audiences drive authentic, high-intent signups.
03	Event partnerships	Expos and community events: Endurance Exchange conferences, USAT Nationals, and local race weekends.
04	Answer Engine Optimization	Optimized to surface when athletes ask nutrition questions in ChatGPT, Perplexity, and other AI search — a lane most competitors ignore.
05	Paid advertising	Targeted paid social and search to accelerate the top of funnel once unit economics are proven.

Live, launched, and learning fast.

Shipped product, early coach base, and a structured research engine already reshaping strategy.

COACHES ENGAGED

60+

At Endurance Exchange 2026, plus ongoing outreach. Source of our Pilot Coach Program roster.

SHIPPED

Publicly launched on Apple App Store and Google Play

Iterating quickly — 80+ iterations and counting.

PILOT PROGRAM

Active Pilot Coach Program

INTEGRATIONS

TrainingPeaks · Final Surge · Garmin · Strava

TRANSPARENT SCIENCE				

Founders embedded in the sport.

CO-FOUNDER

Xuan Huang, Ph.D.

Statistician and data scientist. Former UAB faculty. Deep expertise in ML, recommendation systems, and statistical modeling.

Competitive athlete with strong connections to local endurance athletes communities.

CO-FOUNDER

Lee Martin

Full-stack engineer and competitive triathlete. Architected the dual AI + algorithmic system, offline-first architecture, and Coach Mode web portal. Deep Flutter, Supabase, and AI/ML integration expertise. Domain expert as an endurance athlete.

ADVISORY NETWORK

Established operators and domain experts across endurance sport, AI, and venture.

From beachhead to category.

NEAR TERM

Deepen the wedge

- Expand the Pilot Coach Program
- Expand integrations to more training platforms.
- Grow the founding-member base

MID TERM

Pro & brand partners

- Pro triathlon partnerships
- Boulder presence
- Brand-funded nutrition integrations

A staged expansion — deepen the endurance wedge first, then compound into adjacent performance and active health.

LONG TERM

Cross the chasm

- Expand beyond endurance into adjacent performance and active health
- Unlock the Milkman retail media and grocery curation vision
