Weight	Required kg or lb	YES weightInGrams	YES Weight (kg)	NO	NO	NO
Unit system	Metric / imperial	NO	YES PreferredUnits	NO	NO	NO
Sports trained	Run / bike / swim	PART Infer activity sport	PART Infer workouts/zones	PART Infer workout sport	PART Infer event type	PART Running feed
Dietary preference	Optional enum	NO	NO	NO	NO	NO
Allergies	Optional list	NO	NO	NO	NO	NO

PRIMARY SOURCES	Garmin Health body composition push/ping + bodyComps endpoint	TrainingPeaks GET /v1/athlete/profile	Final Surge identity in POST /oauth/token response	VDOT O2 no profile endpoint	Runna personal iCalendar feed; no profile
-----------------	---	---------------------------------------	--	-----------------------------	---

Current prefill: TrainingPeaks -> name, weight, birth month (day defaults to 1), binary gender. Final Surge -> name. Garmin -> weight (preferred when both Garmin and TrainingPeaks have it). VDOT O2 and Runna -> none.

Legend: YES = direct semantic match. PART = incomplete or inferred; confirm with the user. NO = no onboarding equivalent. *Garmin pregnancy height is not a general athlete-height field.

Scope: active onboarding only. Preserved sport-detail screens and the removed food-like screen are excluded. Full field dictionaries: docs/integration/api-exploration/index.html.
